Health and Safety Training**

BETTER SAFE -than sorry!

MATERIAL HANDLING

Martell Training Systems specializes in material handling and offers a complete Forklift Operator Safety Training Program that complies with OSHA Regulations. Our material handling training program covers the safe operation of **all types** of material handling apparatus.

WHMIS

Legislation demands that all workers exposed to or working with chemicals in their workplace must be trained in W.H.M.I.S. This course is designed to give all the information required to ensure their safety around chemicals. A thorough look at the labelling system, material safety data sheets and how to gain information from each.

FIRST AID AND CPR

As a training partner of the Canadian Red Cross, the W.S.I.B. dictates workplace safety education in Ontario and has set laws regarding first aid called Regulation 1101. All our courses are approved by the W.S.I.B. There are a few levels of first aid available the most common are:

1. Standard First Aid (16) hours and
2. Emergency First Aid (8) hours

Standard First Aid is required by W.S.I.B. for companies with more than 5 employees at any one time who are always accessible.

Emergency First Aid is required by W.S.I.B. for companies with 1-5 employees at one time who are always accessible.

FIRST AID AND CPR

Respirator training includes training in the proper use, care and maintenance of the respirator.

Our fit testing training program provides qualitative fit test methods to comply with **CSA Standard Z94.4-02**. Respirators protect workers against insufficient oxygen environments, harmful dusts, fogs, smokes, mists, gases, vapors, and sprays. These hazards may cause cancer, lung impairment, other diseases, or death.

FALL PROTECTION

Employers are required to train workers to use fall arrest systems and other personal protective equipment correctly while performing these jobs. This training course will teach all workers how to protect themselves by way of guarding, travel restraint and finally fall arrest. A practical component on inspection, donning and doffing the harnesses are included with this course.

FIRE SAFETY

Fire Extinguisher Training: The safe operation of portable fire extinguishers is your first line of defense in protecting your people and property in the event of a fire. The objective of our Fire Extinguisher Training is to inform, demonstrate and provide confidence to employees in the safe and effective use of fire extinguishers in the workplace.

Fire Safety Plans: Our well-devised fire safety plan, coupled with the training implementation requirements, will dramatically increase the speed of evacuation for the occupants. In addition, it will provide fire responders with the critical building fundamentals as they negotiate the structure during a fire emergency.
